

MCHE FOLDED COILS

In 2006, Carrier was the first to introduce microchannel (MCHE) technology in the Commercial Air Conditioning industry.

Today, MCHX / MCHE coils are changing into a new "folded" technology.

This technology originates from the automotive industry where it has been used since more than twenty years now.

What are the advantages of this new technology?

- New tube technology
- Material change: lighter material
- Improved corrosion resistance
- Refrigerant charge reduction

Available on Carrier air-cooled chillers
