# **VSB-VMB**

## PN16 Two/Three-way Valves

MODELS		DN	Kvs	STROKE	
2 WAY	3 WAY	DIN	[m³/h]	[mm]	
VSB3	VMB3	3/4"	6,3		
VSB4	VMB4	1"	10		
VSB5	VMB5	1 1⁄4"	16	16 5	
VSB6	VMB6	1 ½"	22	16,5	
VSB8	VMB8	2"	30		
VSB8A	VMB8A	Δ	40		

#### **APPLICATION AND USE**

Two-way VSB and three-way VMB valves can be used either for control or fluid detection in air-conditioning, thermoventilation and heating plants, both environmental and industrial, and in machines for product thermal process.

Three-way valves should be used only as mixing valves; angle way should never be used for control purposes.

### MANUFACTURING CHARACTERISTICS

The valve body is made of G25 cast iron. The plug is in brass with Contoured-type profile on direct way and V-port on angle way. The stem is in CrNi steel with threaded M8 end and female threaded connections. The stem packing is constituted by a EPDM O-ring with graphited teflon scraper rings.

NOTE: The valves are also available in the stainless steel plug version (profile and Kvs are the same of the brass plug). For further sales information, please contact our Sales Support.

#### TECHNICAL CHARACTERISTICS

CHARACTERISTIC	DESCRIPTION						
Constructions		PN16					
Control characteristics		direct way equal-percentage, angle way linear (VMB)					
Leakage*		direct way 00,03% of Kvs, angle way 02% of Kvs (VMB)					
Connections	female threaded						
Stroke	16,5 mm (max 18,5 mm)						
Allowed fluids	max. temperature 150°C, min. temperature -10 °C (in case of ice on stem and gas use the stem-heater, see actuators data sheets; is not applicable to V.B DN15 vale glycol added max 50%						
	saturated steam max. temperature 150 °C, max. pressure 250kPa (absolute value)						
Weight	see dimensions						

<sup>\*</sup> Leakage is measured according to the EN1349 standard.

ATTENTION: If V.B valves are assembled with MVB+spacer (MVBHT) the max. operating temperature is 140°C, while without spacer is 120°C. For other actuators the max. operating temperature is 150 °C.

The performances stated in this sheet can be modified without any prior notice.

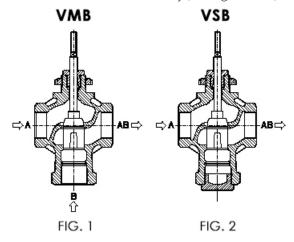

#### **INSTALLATION**

Before valves are mounted, make sure that pipes are clean, free from welding slags, that are perfectly lined up with valve body and not subjected to vibrations.

The valve can be mounted in any position except upside-down (for MVH actuators see Fig. 3).

While assembling, respect the flow directions indicated by the

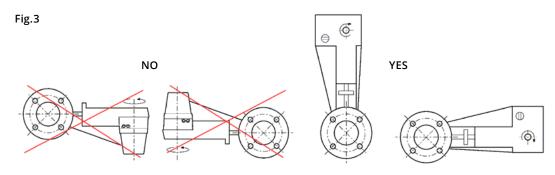

letters located on the valve body (see Fig. 1 and 2) and the application schemes.

#### **ACTUATORS**

VSB and VMB are actuated by MVB, MVH, MVH56EA/C, MVE electrical actuators.

#### **MOUNTING POSITIONS**

#### **OPERATING**

With the stem extended, the direct way is closed. With the stem retracted, the direct way is open.

#### **MAX REGULATION DIFFERENTIAL PRESSURE**

The max regulation differential pressure, it means the pressure which can be used during the stroke, is conditioned by wear between seat and plug and by the performance guaranteed by the actuator for the evaluated valve. So we recommend not to overcome the differential pressure whose value corresponds to the minimum between 200kPa (maximum admitted value not to cause wear) and the one shown in the previous table (max close-off differential pressure).

**NOTE:** The max operating pressures at different temperatures for various PN classes must correspond to the following standards: UNI 1092-02 and UNI 12516-1.
